

Website Audit Step-by-Step Guide

1. Collect Website Information

Record website URL, CMS/framework, hosting, and audit date.

2. Crawl the Website

Use Screaming Frog or a crawler to identify pages, redirects, broken links, and metadata.

3. Technical SEO Audit

Review HTTPS, robots.txt, XML sitemap, canonical tags, indexability, redirects, and URL structure.

4. On-Page SEO

Check title tags, meta descriptions, headings, image alt text, internal links, and keyword optimization.

5. Performance Audit

Run Lighthouse/PageSpeed. Measure LCP, CLS, INP, FCP, TTFB. Optimize CSS, JS, images, fonts, and caching.

6. Mobile Audit

Verify responsive layout, viewport, touch targets, and mobile usability.

7. Accessibility Audit

Check contrast, keyboard navigation, ARIA labels, form labels, heading order, and alt text.

8. Security Audit

Verify HTTPS and security headers (CSP, HSTS, X-Frame-Options, Referrer-Policy, Permissions-Policy).

9. Structured Data

Validate Organization, Website, FAQ, Product, Event, Article, or LocalBusiness schema as applicable.

10. Content Review

Evaluate content quality, readability, duplicate content, CTAs, and internal linking.

11. UX Review

Assess navigation, hero section, spacing, typography, forms, footer, and visual hierarchy.

12. Prioritize Issues

Categorize findings into High, Medium, and Low priority with business impact.

13. Prepare Final Report

Include scores, strengths, issues, recommendations, screenshots, and an action plan.
